## Automated Compliance Engine - Compliance Report

Full portfolio: 28 official trades + 6 team-designed trades

NGUYEN NGOC TIEN (G2506667B) and KOK WEN SHIN (G2506930B)

This report is generated from the structured JSON compliance output. It summarises parser classification, UPI lookup, CFTC/EMIR/MAS reportability, event-contract taxonomy gaps, and the audit explanation emitted for each regime result. The official 28-trade run is included for marker verification, while the 34-trade run is the full submission portfolio.

## 2. Event-Contract Classification Frontier

The following trades demonstrate the hidden assignment lesson: an ordinary identifier defect is different from a taxonomy gap. T026, T028 and T033 have a regulatory nexus through a CFTC-regulated DCM, while T027 is the offshore/VPN Polymarket case and remains a jurisdictional-scope gap under the assignment model.

| Trade | Event / Use case                          | Platform type                     | UPI                   | Finding type                       | CFTC           | EMIR           | MAS            |
|-------|-------------------------------------------|-----------------------------------|-----------------------|------------------------------------|----------------|----------------|----------------|
| T026  | EventContract / PoliticalOutcome          | CFTC_REGULATED_DCM                | NO_PRODUCT_DEFINITION | TAXONOMY_GAP_WITH_REGULATORY_NEXUS | CONDITIONAL    | NOT_APPLICABLE | NOT_APPLICABLE |
| T027  | EventContract / MacroeconomicOutcome      | DECENTRALISED_BLOCKCHAIN_PLATFORM | NO_PRODUCT_DEFINITION | JURISDICTIONAL_SCOPE_GAP           | NOT_APPLICABLE | NOT_APPLICABLE | NOT_APPLICABLE |
| T028  | EventContract / RegulatoryDecisionOutcome | CFTC_REGULATED_DCM                | NO_PRODUCT_DEFINITION | TAXONOMY_GAP_WITH_REGULATORY_NEXUS | CONDITIONAL    | NOT_APPLICABLE | NOT_APPLICABLE |
| T033  | EventContract / MonetaryPolicyOutcome     | CFTC_REGULATED_DCM                | NO_PRODUCT_DEFINITION | TAXONOMY_GAP_WITH_REGULATORY_NEXUS | CONDITIONAL    | NOT_APPLICABLE | NOT_APPLICABLE |

The engine returns NO\_PRODUCT\_DEFINITION for these trades because no active ANNA-DSB EventContract template exists in the current taxonomy. The CFTC result is CONDITIONAL for Kalshi / CFTC-regulated DCM cases, but NOT\_APPLICABLE for the offshore Polymarket case. EMIR and MAS are NOT\_APPLICABLE for all event contracts under the assignment model.
